The amendment received 23 February 2006 has been made of record. Claims 1, 3-7, 9-11, 13, 15 and 16 are pending.

The rejections under 35 USC 112 and 102(b) contained in the previous office action are withdrawn in view of applicants' amendments and arguments.

Upon further consideration, the indicated allowability of claims 8-11 is withdrawn.

Claims 4-7, 9-11, 15 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Nishida et al.

Nishida et al disclose processes for melt extruding filled thermoplastic films. These methods include passing films between rollers at temperatures above the melting temperature of the resin. The filler is taught as being present in amounts of up to 20%.

The MT of the resin of the reference is assumed to inherently meet the limitations of the rejected claims. Applicants, specified molecular chain length is seen as inherently met by the resins of the reference given their Mw's as being as high as 2,000,000.

While the reference may be silent regarding the c-axis orientation coefficient, it is the position of the examiner that stretch ratios such as taught by the reference would inherently result in orientation coefficients such as claimed instantly.

Claims 1 and 3 are allowed.
